Certificate of Breed

OWNER'S NAME: Laura Harmon

DOG'S NAME: "Skylar"
Hickory's Point of HOPE

TEST DATE: January 8th, 2019

This certifies the authenticity of **Skylar**'s canine genetic background as determined following careful analysis of more than 200,000 genetic markers.

Welcome to the **Embark** family!

LLEWELLIN SETTER

WOLFINESS **2.2% HIGH**

MATERNAL HAPLOTYPE **A414/643**

PATERNAL HAPLOTYPE **N/A - No "Y' chromosome**

HEALTH - Good news! Skylar did not test positive for any of the genetic diseases that Embark screens for.

LLEWELLIN SETTER

The Llewellin Setter is widely cherished as one of the best upland bird hunting dogs. A strain of the English Setter, the Llewellin has a great many devotees and is recognized as its own breed by The American Field Dog Stud Book, the oldest dog registry in the USA. These dogs are well-loved for their hunting prowess in intelligence, stamina, nose, biddability, in addition to its gentle nature. While the history of the English Setter goes back to the 1500s, the Llewellin Setter was developed in a breeding program by R. L. Purcell Llewellin in the 1860s, using dogs from Laverack. These dogs were intended to excel in field work, and Llewellin succeeded in that task. Today, a great number of field-type English Setters have Llewellin blood from the historical crossing of the lines.

Fun Fact When a Llewellin Setter smells a bird nearby, rather than barking, they’ll start wagging their tail to alert their owner.

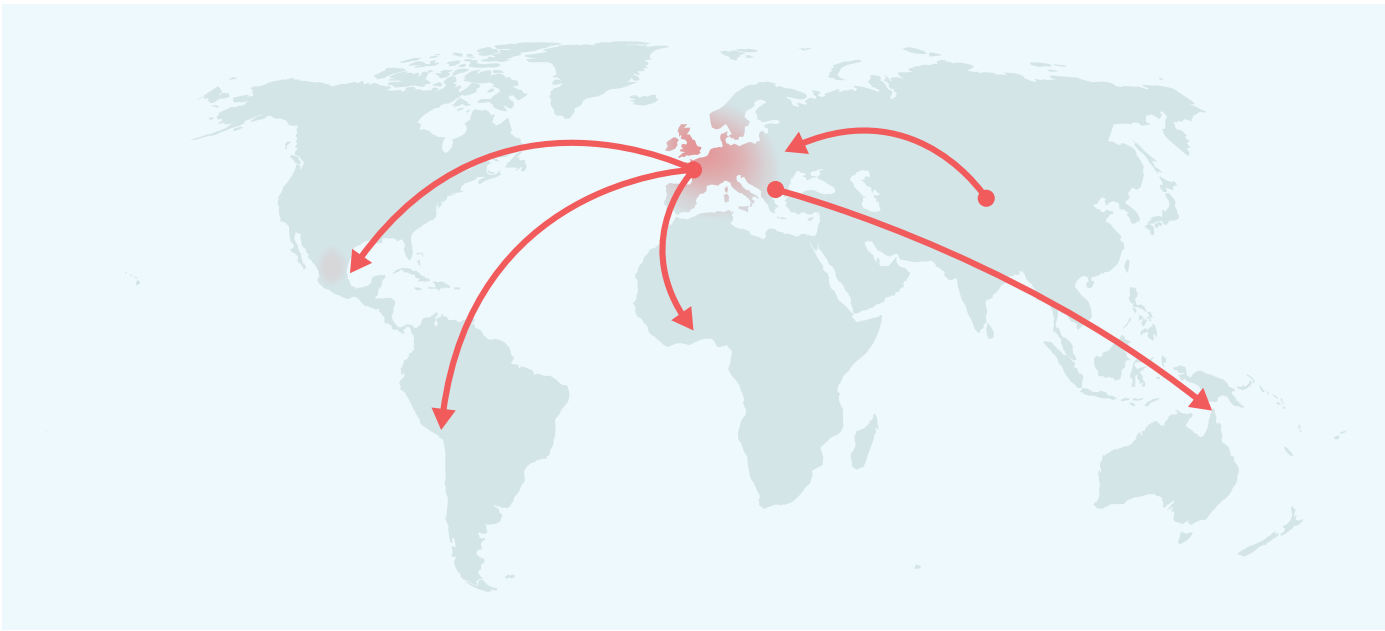
MATERNAL LINE



Through Skylar's mitochondrial DNA we can trace her mother's ancestry back to where dogs and people first became friends. This map helps you visualize the routes that her ancestors took to your home. Their story is described below the map.

HAPLOGROUP: A1b

This female lineage was very likely one of the original lineages in the wolves that were first domesticated into dogs in Central Asia about 15,000 years ago. Since then, the lineage has been very successful and travelled the globe! Dogs from this group are found in ancient Bronze Age fossils in the Middle East and southern Europe. By the end of the Bronze Age, it became exceedingly common in Europe. These dogs later became many of the dogs that started some of today's most popular breeds, like German Shepherds, Pugs, Whippets, English Sheepdogs and Miniature Schnauzers. During the period of European colonization, the lineage became even more widespread as European dogs followed their owners to far-flung places like South America and Oceania. It's now found in many popular breeds as well as village dogs across the world!

HAPLOTYPE: A414/643

Part of the A1b haplogroup, this haplotype occurs most frequently in the English Springer Spaniels.

HICKORY'S POINT OF HOPE

DNA Test Report | Test Date: January 8th, 2019 | embk.me/hickoryspointofhope_skylar

CLINICAL TRAITS

These clinical genetic traits can inform clinical decisions and diagnoses. These traits do not predict a disease state or increased risk for disease. We currently assess one clinical trait: Alanine Aminotransferase Activity.

Alanine Aminotransferase Activity result: Low Normal

Hickory's Point of HOPE has one copy of a mutation associated with reduced ALT activity as measured on veterinary blood chemistry panels. Please inform your veterinarian that Hickory's Point of HOPE has this genotype, as ALT is often used as an indicator of liver health and Hickory's Point of HOPE is likely to have a lower than average resting ALT activity. As such, an increase in Hickory's Point of HOPE’s ALT activity could be evidence of liver damage, even if it is within normal limits by standard ALT reference ranges.

More information on Alanine Aminotransferase Activity:
This result helps your vet understand what your dog's baseline ALT activity is. The enzyme alanine aminotransferase, or ALT, is commonly used to evaluate liver health. Dogs with one or more copies of the "A" allele are likely to have a lower baseline ALT activity ("low normal") than dogs with zero copies of the "A" allele ("normal"). This means that you and your vet might adjust what you consider your dog's baseline ALT levels to be, and consider deviations from this as "abnormal." Please note that this mutation should never increase your dog's ALT activity. If your dog has high ALT activity, please consult your veterinarian.

DNA Test Report | Test Date: January 8th, 2019 | embk.me/hickoryspointofhope_skylar

OTHER CONDITIONS

Good news! Skylar tested clear for 8 other common genetic diseases that Embark tests for.

- MDR1 Drug Sensitivity (MDR1)
- Progressive Retinal Atrophy - prcd Progressive rod-cone degeneration (PRCD Exon 1)
- Hyperuricosuria and Hyperuricemia or Urolithiasis (SLC2A9)
- Dilated Cardiomyopathy (PDK4)
- Von Willebrand Disease Type II (VWF Exon 28)
- Primary Lens Luxation (ADAMTS17)
- Degenerative Myelopathy (SOD1A)
- Exercise-Induced Collapse (DNM1)
